

## AP001 LATERAL

### Functions

PUSH-BAR type of panic exit device for surface mounting.

Online data sheet

### Technical Features

The lateral version AP001 system consists of:

- The main reversible mechanism (A) with a lateral spring latch and the mechanism protection plug
- the shimming plate (B) for the main mechanism
- the secondary reversible mechanism (C) and its mechanism protection plug
- the left and right bracket stop blocks (D)
- the adjustable lateral striker (E) to be installed by the lateral spring latch of the main mechanism and its stackable shims, to be placed under the striker for profiles with different steps (no. 1 shim size 1 mm, no. 2 shims size 2 mm and no. 2 shims size 4 mm)

The version suited for use on fire doors AP001F has a steel lateral striker (F) (instead of zamak as on the standard version) and a set of overlapping shims for use on profiles with different steps.

The lateral AP001 system is to be combined with the additional locking mechanisms.

### Materials

Mechanisms in zinc plated steel  
 Painted steel mechanism protection plug  
 Brackets and bracket stop blocks in zamak  
 Striker in zamak and polyamide shims for AP001 version  
 Striker and shims in stainless steel for AP001F version  
 Spring latch in stainless steel  
 Shimming plate in zinc plated steel  
 Grub screws and fixing screws in zinc plated steel

Standard version

Fire version
